

Rules :

1. This introduces the concept of cages. Squares of the same color form a cage spreading into more than one row or column.
2. you can use the numbers from 1 to 3 only
3. Numbers can not be repeated in the rows and columns but can be repeated in a cage
4. For example if we have to make 5+ then the numbers need to be put in such a way that when added these numbers should be equal to 5. When there is no operation given then number as such has to put in the cage

1-		3x
6+		
		2 2
